

Email CC

Email CC allows specified emails being sent through Marketo to include CC recipients.

This feature is available on all Marketo email assets, regardless of how the email is sent (batch or trigger campaign). The CC recipient will receive an exact copy of the email sent to the chosen Marketo person. As such, any engagement activity (opens, clicks, etc.) will be logged to the activity log of the Marketo Person in the "To" line of the email. However, delivery activity (sent, delivered, hard bounce, etc.) *other than "soft bounce"* will **not** register, as Marketo is able to distinguish delivery events for the Marketo Person from the CC recipients'. Marketo will only CC up to 100k People at a time. If your smart list exceeds 100k and it's imperative every person on it gets CC'd, we recommend breaking your list up.

Note

Email CC wasn't designed to be used with A/B Tests. You can use it anyway if you'd like, however as it's technically not supported, Marketo Support wouldn't be able to assist with any troubleshooting.

What's in this article?

Set Up Email CC

Using Email CC

After the Send

Set Up Email CC

1. In My Marketo, click **Admin**.

2. In the tree, select **Email**.

- Location
- Smart Campaign
- Email
- @ Communication Limits
- Marketo Sky
- Tags

3. Click **Edit Email CC Settings**.

4. Select up to 25 Marketo Lead or Company fields (of type "Email") to make available for use as CC addresses within emails. Click **Save** when done.

Using Email CC

1. Select your email and click **Edit Draft**.

2. Click **Email Settings**.

3. Select up to five fields you want used to CC people. In this example, we only want the Lead Owner CC'd. Click **Save** when done.

Email Settings ✕

- Operational email (Bypass Unsubscribe/Marketing Suspended)
- Publish to Marketo Sales Insight
- Text Only
- Include View as Web Page
- Disable Open Tracking
- Preheader

```
E <[[http://mylink]]>LIT I <[[http://mylink]]>PSUM DOLOR A  
<[[http://mylink]]>ME
```

Fields Used as CC Addresses (2 Admin Enabled Fields)

Select CC Fields...

- {{company.Account Owner Email Address}}
- {{lead.Lead Owner Email Address}}

It's as simple as that! In the above example, when you send the email, the Lead Owner of the recipients you chose will be CC'd.

Note

If an invalid email address is in a CC field, it will be skipped.

For quick identification, the Email Summary view shows you if/which Email CC fields were selected.

Edit Draft

Preview Email

Save the Date

Type: Email
Status:  Approved
Version: 2.0

Summary

Used By

Template: [Futura \(Marketo Starter Template\)](#)
Sales Insight: Not published
Text Only: No
Operational: No
Branded Domain: com (default)
Snippets Used: None

CC Addresses Used: `{{lead.Lead Owner Email Address}}`

If the email is approved, but the Marketo Admin disables one or more of the CC fields before the email is sent, **those people will not receive an email**. In that scenario, the Email Summary view will gray out any fields that were disabled post-approval but pre-send:

Snippets Used:	None
CC Addresses Used:	{{lead.Lead Owner Email Address}} 

This field is no longer enabled for EmailCC. Contact your administrator

Note

You will also see the above error in the Email Settings section of the email draft.

After the Send

- If a CC recipient clicks a tracked link in the email, click activity (like all other engagement activity) will be associated with the email's main recipient. Additionally, they may click through to a page with Marketo's web tracking code (munchkin.js), causing them to be cooked as the main recipient.

Tip

You have the option of [disabling some or all tracking links](#) in an email.

- After an email campaign is executed, Send Email activity will include a list of all CC addresses that were included for each recipient of the mailing. If any CC addresses were skipped due to unsubscribe, it will be noted in the activity as well.
- Unsubscribe links and pages function normally in CC'd emails. This allows CC recipients to successfully unsubscribe if they wish (complying with anti-spam regulations), and a record of this action will be stored in the Marketo Database.
- People who are listed as unsubscribed in your Marketo Database will **not** receive emails via CC.
