

# Installing Sales Engage for Office365 Mac OS, Windows, and Online

We have created an integration with Outlook Web Apps. Outlook Web Apps is a version of Outlook provided with the Office 365 subscription. Since it's browser-based, the integration will work on both Mac and Windows. [Click here for the complete installation guide.](#)

As an Admin, you can [install this on behalf of your entire team.](#)

## Note

If you don't have a store button, you're not on the latest version of Outlook for Mac. Follow these steps to get updated:

- i. Go to the Help button (in the very top navigation, to the right of "Outlook")
- ii. Choose **Check for Updates** in the drop-down menu
- iii. Update to the latest version of Outlook and come back to these steps when you're done

Subject: December special for your team

Hey {{first\_name}},

I wanted to reach out because we've seen amazing adoption and success with the {{company}} team on Marketo Sales Engage

, and we're doing a special for a small group of our high-growth and premier customers.

**For the month of December, we're offering a one-time, 10% discount when you purchase an additional 20 seats or more.** These will be prorated for the remainder of your contract term, discount from your current per-seat cost.

I'd love to connect this week and see where your team is at with your growth and make it super easy to spread the Tout love to more of your sales team!

Do you have 15 minutes for a quick chat?

Talk soon,

## Note

The .Net add-in no longer supports scheduling emails from Outlook. You'll need to update to the Office365 add-in to schedule emails.
