

Disable Pre-fill for a Form Field

When a web visitor is known (cookie'd), Marketo forms will pre-fill fields with their information by default. If you want to turn this off, here's how to do it.

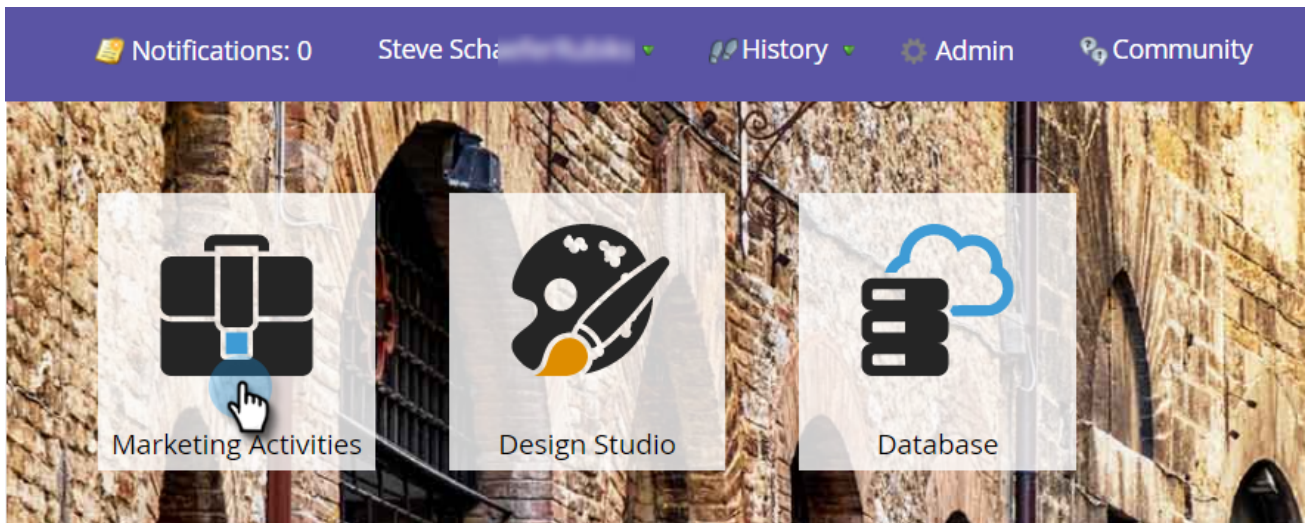

Note

Form Pre-fill is enabled by default. Landing page level pre-fill settings and admin level pre-fill settings trump the form level setting:

Form < Landing Page < Admin

1. Go to **Marketing Activities**.

2. Select your form and click **Edit Form**.

The screenshot shows a user interface for managing marketing forms. At the top right, there is a notification bell icon with the text "Notifications: 0" and a user identifier "demo3". On the left, a sidebar contains a navigation menu with the following items: "Marketing Activities", "Learning", "My Program - RF", "My New Form" (highlighted in orange), "My Learning Page", "Learning 02", "Learning 03", "Nurturing", and "Scoring". A mouse cursor with the number "1" is pointing at "My Learning Page". The main content area displays a form titled "My New Form". Above the form, there are two buttons: "Form Actions" and "Edit Form". A mouse cursor with the number "2" is pointing at the "Edit Form" button. Below the form title, the form's details are shown: "Status: Approved" (with a green checkmark icon) and "Type: Form". On the right side of the form, a partial table is visible with columns for "Status", "Summary", "Created", "Last", and "Used".

Caution

Form Pre-fill does not work when embedding a form on your own pages. It only works on Marketo landing pages.

3. Select one of the fields and set **Form Pre-fill** to **Disabled**.
